

Resource Efficiency

Real-time management

Evidence based policies

Engagement & "Activation"

IDEAS

Digital twins, esp. in difficult times like COVID

making data FAIR (findable, accessible, interoperable, reusable)

improve the current use of data

Provide digital information in a useful way

Inclusion: make data accessible

Make data available to citizens

Digital transition is now, we need real data

using personas to move around the visualized services

language could be an obstacle

RELEVANT DATA

real time data

traffic data

more granular times of services or shops, parks

real estate data

Digital information based on location of people, shops

Data are useful in order to understand better the social situation in cities

Availability of services

data are used in municipality action plans

Progress

possibility to have information about culture

RELEVANT QUESTIONS

how to collect meaningful feedback from citizens in order to improve the platform services?

how to encourage data reuse in new solutions?

how to visualize data for each stakeholder group?

how to analyze real-time data analysis across different results (eg. mobility)

How to convince / train duty policy makers to engage in data driven governance?

How to increase citizen awareness about the new opportunities
